

Trauma Center Practice Management Guideline

Iowa Methodist Medical Center — Des Moines

Oral Anticoagulant Emergent Protocol

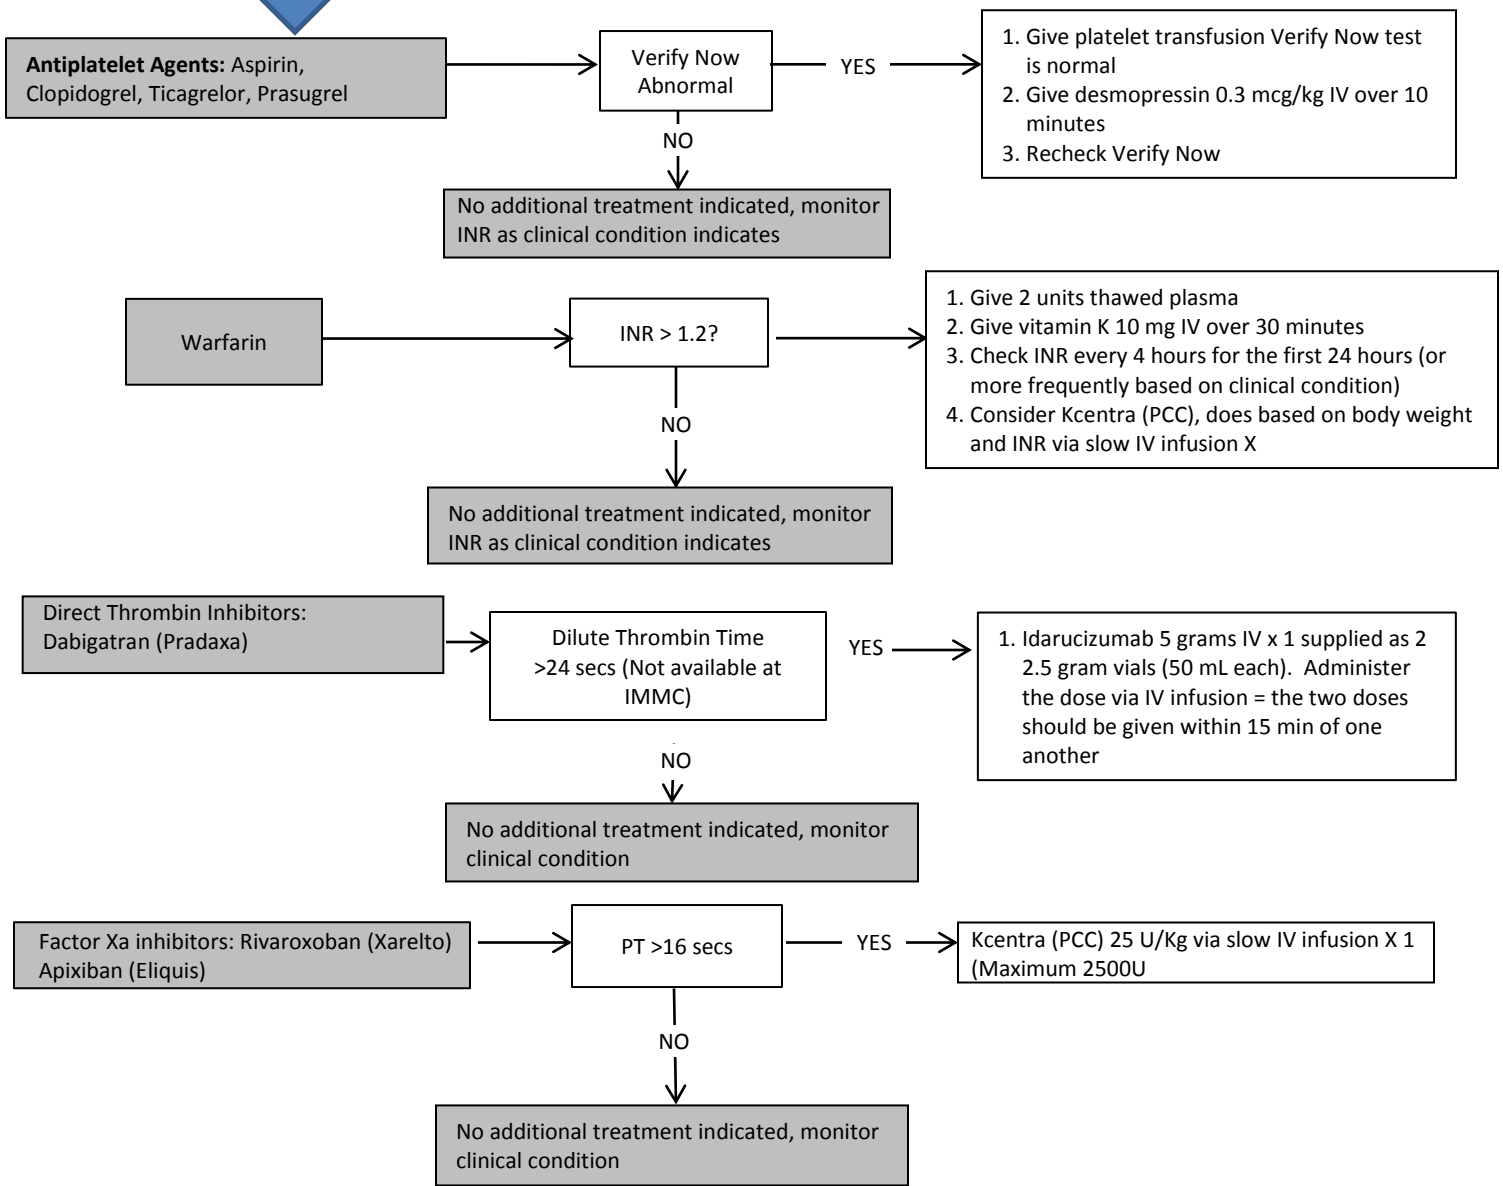

ADULT Practice Management Guideline	Effective: 06/2014
Contact: Trauma Center Medical Director	Revised: 07/2016

General Measures

- Control bleeding with local hemostatic measures
- Initiate appropriate resuscitation measures, including blood products
- Insure adequate urine output
- STOP any anticoagulant/antiplatelet agent if not already done, and record time of last dose
- Laboratory Orders STAT: CBC, BMP, fibrinogen, Thrombin Time, a PTT, PT/INR, Trauma Rotem

Reversal Strategies

Major Bleeding: Defined as intracranial hemorrhage or significant decrease in the hemoglobin concentration resulting in hemodynamic compromise or compression of a vital structure and felt to be related to anticoagulation.
