

Needle Cric Procedure

- Identify Cricothyroid membrane and stabilize/prep larynx
- Insert large bore needle (12-16 gauge), attached to a syringe, direct inferiorly leaving the Catheter over needle
- Aspirate syringe as you insert the needle to ensure placement in the airway
- Advance catheter and remove needle
- Connect to transtracheal jet vent (TTJV) (BVM for infants - 3.0 ETT) Oxygen pressure (20-30 psi) 1 second on/2-3 seconds off
